

Engineering Information Management is our business

Data collection

AssetNet consultants have experience on a wide range of complex projects. They will spend time with you to fully understand your needs and provide our expertise to:

- Define the data collection strategy based on your specifications
- How to customize your project requirements within the system
- Deployment to the hundreds of vendors globally
- Manage and monitor vendor deliverables in real time
- On-board review and approval workflow management
- Work to industry IM standards such as ISO 15926 and ISO 14224
- Import and export your asset data using our system
- Produce vendor data progress and completeness reports

Let us show you how we can save you time and money on your next project.

One System

AssetNet allows you to **capture, review and comment** on vendor data submissions - all within one system. Easy to use, easy to configure and easy to deploy with feature rich project functionality.

Easy to use, easy to configure and easy to deploy

AssetNet is engaged early on projects by Owners, EPC Contractors, Engineering or the Project Management team. We will ensure our system and processes are in place for you to collect your critical equipment data.

With flexible service models AssetNet can provide you with a **comprehensive engagement to suit the project**. The platform is scalable to both users and project complexity.

Our Experience

We do onshore data collection for Refineries, Power Plants, Mining, Chemical, Pipelines and Major Infrastructure projects. **The collection of tags and equipment data is our specialty.**

We are experienced in offshore construction for Production, FLNG, FPSO, Drilling Rigs and Subsea Equipment. **Long term equipment maintenance and safe operations all rely on quality Asset Data.**

Capture more information, manage change and achieve faster turn-around times

User Collaboration

Promote efficient collaboration with fit for purpose, secure, cloud-based **software that spans companies, countries and time zones**. Ideal for your many hundreds of Vendors located globally.

We provide project wide workflows, reduced timelines, information security and role based training.

Connected Network

The AssetNet network connects projects and people. Our customers **capture more information, manage change and achieve much faster turn-around times** with greater control across multi-party projects.

Contact AssetNet today and we will show you how you can collaborate and connect your project in the cloud.

Specialising in:

The Oil & Gas, Mining, Chemical, Power, Construction and Infrastructure industries.

Project Deliverables

- Vendor tags
- Equipment data
- Hazardous Area register
- Spare Parts register
- Fluid schedules
- Hose registers
- Safety Valve registers
- Equipment lists
- Joint Completions register
